

15 A SMART WALL SOCKET & PLUG

With 4G, NFC and temperature sensors.

Plug Overview

High quality PC material

It has the characteristics of UV resistance and corrosion resistance. This product is installed vertically and is guaranteed to be enclosed.

shockproof

fall protection

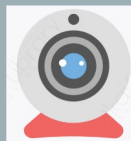

High temperature resistance

TEMPERATURE SENSOR

4G NETWORK

- Temperature sensor to monitor status of plug. When there is a voltage dip that causes heat surges can reduce charge rate. Protects the wiring.
- Optional for premium users. Can allow tie in to the RE app without a local wifi network. Easy installation in remote locations
- Secure Relationship- Dedicated Plug to allow charging.
- Authentication for full charge rate of 2.2kw (3.2 kw future)
- Second Authentication method.
- Can communicate directly to bike or can access far field communication via local area network.
- Can communicate charger status if circuit is tripped
- With a basic camera can we monitor the plug status and feedback to users through the app as well as add a layer of security for the plug point
- Locks the cable to the plug to ensure others do not tamper when charging. Security and peace of mind.

High quality PC material

It has the characteristics of UV resistance and corrosion resistance. This product is installed vertically and is guaranteed to be enclosed.

shockproof

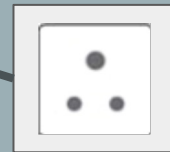

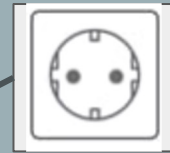

fall protection

High temperature resistance

- To make a common global architecture and to drastically reduce the cost of maintenance due to usage. Proposal is that the plug be removable.

How to make it scalable?
Individual or group? Cost of both?

Placement on shop wall?
Upper and lower weather resistance.

Swappable for global usability as well as maintenance

Plug Overview

High quality PC material

It has the characteristics of UV resistance and corrosion resistance. This product is installed vertically and is guaranteed to be enclosed.

shockproof

fall protection

High temperature resistance

Visual Design

- Design for minimal infrastructure cost - Scale to available power. For example if site has only 6kw of available power will limit location to 3 wall units.
- Very premium but simple design will allow it to be easily scalable from 1 to 100 units.
- Should be a premium brand statement but not imposing, the environment should speak to riders not the plug.
- Should use recycled materials to help tell our sustainability story.
- Should be located high off the ground to prevent tampering.
- External Light to communicate status, Working, Broken, Reserved.

Adaptor Overview

TEMPERATURE SENSOR

4G NETWORK

High quality PC material

It has the characteristics of UV resistance and corrosion resistance. This product is installed vertically and is guaranteed to be enclosed.

shockproof

fall protection

High temperature resistance

Triggers a secure connection between Vehicle and Charger or App and Charger.

Allows for a simple quick power unlock
